

Production of media content is the main role of DFL Digital Sports GmbH. With its headquarters in Cologne, DFL Digital Sports GmbH – a fully-owned subsidiary of DFL Deutsche Fußball Liga GmbH – creates media content on its behalf and implements its operational content output via various technologies. Production of content for international markets and in-house websites such as bundesliga.de also forms part of the work of this business unit.

Quality Assurance Manager (m/f)

Working closely with other teams such as Product, Development and Content teams, you'll provide a vision for the QA of the DFL's products and services.

As the Quality Assurance Manager (m/f), you will be part of the Product and Technology team of DFL Digital Sports GmbH and you will be responsible for further professionalising the quality assurance of our digital content by bringing it to the next level.

Responsibilities:

- Utilise key data from user tracking, operational performance, functional compliance, product performance metrics, in-depth qualitative studies and industry learning to inform on the overall quality of our products in a meaningful measurable way.
- Communicate effectively at all levels of the organisation
- Deliver valuable insights to the company
- Manage external suppliers, SaaS and contract developers/testers
- Collaborate with other teams to improve QA issues and sources of problems
- Building solutions to measure system and product quality
- Alongside enthusiasm for sport in general and football in particular, you should also demonstrate the following abilities:
- Self-motivated with a hands-on mentality
- Team player
- Striving for the new
- Adaptable for a fast pacing environment

Preferred Qualifications:

- Experience with Cucumber/ BDD
- Development experience with Java, JS or other similar languages
- Experience with real-time event based systems

What Digital Sports offers:

- The possibility to work in an international and dynamic team
- A wide range of tasks in a growing industry
- The possibility to bring in your own ideas
- Trainings, on the job/off the job (optional)
- Relocation Service (optional)
- Fresh fruit daily

Qualifications

- Expertise in operations monitoring, test automation and manual testing
- Experience with qualitative and quantitative data methodologies
- Strong organisational skills
- Proven experience communicating across teams, departments and suppliers
- Some exposure to production testing, A/B Testing and software release processes
- Experience coding with native and/or mobile web test automation frameworks
- Strong understanding of mobile as a platform (native and/or mobile web)
- At least 3 years working in the QA area
- Understanding of Continuous Integration and Continuous Delivery systems
- Experience working with Cloud based systems
- Understanding of how the internet and basic networking works
- Experience in agile product development and testing
- Fluent in written and spoken English

The position is initially based on a two-year fixed contract.
